

KEY INVESTOR INFORMATION

This document provides you with key investor information about this fund. It is not marketing material. The information is required by law to help you understand the nature and the risks of investing in this fund. You are advised to read it so you can make an informed decision about whether to invest.

BIL Invest Patrimonial Defensive, a sub-fund of the SICAV BIL Invest

Class P-Dis - Distribution shares: LU0509289855

Competent authority: CSSF (Commission de Surveillance du Secteur Financier)
Management company: BIL Manage Invest

OBJECTIVES AND INVESTMENT POLICY

Principal assets traded:

Bonds, cash and money market instruments issued by all kinds of issuers on the global markets, through investment funds and/or derivative products.

Investment strategy:

The fund of funds seeks to achieve capital growth over the recommended investment period through diversified investment, prioritising net exposure to bonds.

Within the limits of the fund's investment objective and policy, the management team makes discretionary investment choices in the portfolio based on analyses of the characteristics and growth prospects of the assets traded and mathematical models.

Net exposure to equities will be no more than 25% and may be reduced substantially depending on the manager's expectations in terms of the development of financial markets and in order to reduce the risk to the investor.

Therefore, the fund may temporarily invest mainly or even exclusively in money market assets and/or bonds through funds and/or derivative products and/or hold the assets in deposits and/or current accounts.

The fund may use derivative products both for investment and hedging purposes (hedging against unfavourable future financial events).

The sub-fund is not an index compartment and will be actively managed.

Redemption of shares:

On request, every day, in Luxembourg.

Allocation of income:

Distribution.

Recommendation:

This fund may not be suitable for investors who plan to withdraw their capital within 3 years.

RISK AND REWARD PROFILE

• The risk level reflects the maximum between, on the one hand, the fund's historical volatility, the volatility equivalent to that of the risk limit adopted by the funds and/or the volatility of an allocation of assets equivalent to that of the fund at the time of the calculation. The volatility indicates the extent to which the value of the fund may fluctuate upwards or downwards.

- The historical data may not be a reliable indication for the future.
- The indicated category may vary over time.
- The lowest category does not mean "risk-free".
- There is no guarantee or mechanism to protect the capital.

The investor needs to be aware of the following significant risks which are not necessarily adequately taken into account by the indicator:

- **Credit risk:** the fund is exposed to the risk of default of an issuer in terms of honouring the payment of coupons and/or the repayment of

the amount borrowed. This risk is higher as the fund may invest in high-yield debt issues whose issuers are considered risky.

- **Counterparty risk:** The fund may use OTC derivative products and these may represent a counterparty risk, i.e. the inability of the counterparty to honour its commitments to the fund. This counterparty risk could be fully or partially hedged by the receipt of guarantees.

- **Risk related to financial derivative instruments:** their use implies risk associated with the underlying assets and can accentuate downward movements via the resulting leverage effect. Hedging strategies using derivatives may not be perfect. Some derivatives may be difficult to value under exceptional market circumstances.

- **Emerging countries risk:** emerging countries may experience political, legal or fiscal uncertainties or other events that could impact negatively on the assets of the fund. The assets traded in these countries may be subject to market movements that are potentially more rapid than in the major international markets and listing differentials that may be considerably bigger under certain market conditions. These assets may prove to be less liquid and may not be able to be sold quickly and at reasonable prices. Exchange rate fluctuations involving the currencies of emerging countries may be sudden and substantial.
